

The Modernization Road Trip

From legacy tools to smarter
tech, enjoy the ride.

FedRAMP

GovRAMP

TX-RAMP

Welcome to the Journey

Every IT road trip starts somewhere. For most state and local governments, that means navigating flat budgets, legacy tools, and growing cybersecurity expectations. The good news is you don't need a convoy to get there.

NinjaOne helps IT teams travel lighter with automation, visibility, and security in one unified, GovRAMP, TX-RAMP, and FedRAMP® Authorized platform. You can leave tool sprawl behind, reduce manual work, and take the fast lane toward modernization, compliance, and confidence.

“

*Less time fixing. More time leading.
That is the NinjaOne way.”*

Visibility City

See everything, manage anything

Without complete visibility, it is impossible to protect what matters. With NinjaOne, IT teams gain a real-time view of every endpoint including laptops, desktops, mobile devices, and servers, all from one dashboard.

Carahsoft achieved
100 percent endpoint visibility
and aligned with NIST and public
sector frameworks using NinjaOne.

*Visibility is the first step toward better control
and stronger cybersecurity.*

Automation Alley

Save time and eliminate manual tasks

Manual updates slow everything down. NinjaOne automates patching, onboarding, software deployment, and maintenance, allowing your IT team to focus on bigger projects.

Bonner County, Idaho
cut **100 hours** of manual updates
each month after switching to
NinjaOne's cloud-native endpoint
management platform.

Automation is how small teams achieve big results.

Compliance Canyon

Strengthen security and meet standards

Public sector IT teams face constant compliance pressure. NinjaOne helps agencies meet NIST, HIPAA, and state requirements with automated patching, role-based access, and real-time reporting.

The City of Sarnia
reduced patching time by
90 percent and improved
compliance reporting to qualify
for cyber insurance.

*Compliance does not have to be a cliff.
With automation, it becomes a clear
and manageable path forward.*

Efficiency Peak

Do more with less

Budgets are tight, but the work never slows down. By consolidating tools into one platform, NinjaOne helps agencies lower costs, reduce complexity, and regain valuable time.

Kansas City replaced ten tools, saved **200,000 dollars** annually, and regained twenty hours a month for strategic projects.

Efficiency happens when technology is simple, unified, and effective.

Resilience Springs

Stay secure and keep services running

Public services cannot pause for outages or downtime. NinjaOne's cloud-native, remote-first platform keeps systems running smoothly with built-in backup, monitoring, and remote remediation.

El Dorado, Kansas reduced ticket resolution time by **90 percent** and cut support travel by the same amount.

Resilience means being ready for anything, even from miles away.

The Destination: Modern IT Operations

Modernize, secure, simplify

Every stop on the route brings your agency closer to a unified and efficient IT operation. NinjaOne provides the automation, visibility, and control you need to serve citizens more effectively without the roadblocks of legacy tools.

With NinjaOne, modernization is not a distant goal. It is your next stop.

The Road to Modernization: Real Results

KANSAS CITY, MISSOURI:

Saved \$200k annually in IT costs

CARAHSOFT:

Achieved 100% endpoint visibility

BONNER COUNTY, IDAHO:

Eliminated 100 hours of manual work

SARNIA, ONTARIO:

Reduced patching time by 90%

EL DORADO, KANSAS:

Resolved tickets 90% faster

Simplify IT. Strengthen Security. Modernize Government.
